

Self-drilling screw JT3-WD-6-5.5

Application range

- > Special screw for fastening wood to steel substructures

Properties

- > A2 stainless steel with hardened steel drill point
- > With full thread
- > The wings widen the drill hole in the wood component to be fastened in order to prevent forced feed. They break off as soon as they touch the steel substructure. This prevents the wood to be fastened from being pushed away from the substructure.

Note

To ensure shearing of the wings, the material thickness of the steel substructure must be at least 2.0 mm.
